CARRER OBJECTIVE

Final-year Computer Science student with a strong foundation in Software Development Lifecycle and Full Stack development. Passionate about building scalable, user-focused apps with clean, maintainable code. Passionate about learning and building with emerging technologies, demonstrated through self-initiated projects. A consistent and driven learner with a marathoner mindset—committed to solving problems.

EDUCATION

B.Tech - Computer Science and Engineering (Internet of Things)

Institute of Engineering and Management, Salt Lake, Kolkata, India

2022-26(exp.)

CGPA: 8.52

WBCHSE - PCM with Computer Science (Higher Secondary)

Howrah Zilla School, Howrah, India

2019-21

87.4%

PROJECTS

GOSSIP([Link](#))

- Built a full stack responsive real time chat app using web sockets, implementing user authentication, sending and receiving messages, showing online people.
- Built a modern UI using React with Vite for faster optimized performance.
- Developed RESTful APIs using Node.js and Express.js for robust server-side logic.
- Implemented secure authentication using JWT, bcrypt for password hashing, and cookie-parser for session handling.
- Managed data with MongoDB, utilizing Mongoose for efficient schema-based modeling.
- Integrated WebSocket(ws) for real-time communication.
- Deployed backend services on Render and frontend applications on Vercel.

Real-Time Collaborative Kanban Board (Webalar Internship Assignment) ([Link](#)) | 11 July-17 July, 2025

- Built a full-stack Kanban-style To Do Board with real-time task updates, smart assign feature, and conflict resolution mechanism for collaborative task management.
- Designed an interactive and responsive UI using vanilla CSS and React for consistent performance across devices.
- Implemented RESTful APIs using Node.js and Express.js to manage users, boards, columns, and tasks.
- Enabled secure user registration and login using JWT-based authentication and bcrypt password hashing.
- Used MongoDB with Mongoose for schema modeling and efficient data storage of nested board-task structures.
- Integrated Socket.IO for real-time syncing of tasks, enabling seamless multi-user collaboration.
- Developed Smart Assign logic to distribute tasks efficiently and built conflict resolution mechanisms for concurrent task edits.
- Delivered this entire project in 6 days by handling ambiguous requirements as a technical assignment for Webalar's Full Stack Internship.
- Deployed backend on Render and frontend on Vercel for fast and reliable access.

SKILLS

Programming Language: C++

Frontend: JavaScript, HTML, CSS3

Backend: Node.js

Communication Protocols: HTTP, WebSockets

Frameworks: React, Express.Js, Tailwind CSS

Tools: Git/GitHub, Postman, Proficient with Google Workspace(Docs, Slides, Drive),

Databases: MongoDB

Relevant Coursework: Software Development Lifecycle, IOT protocols(MQTT, HTTP, Web Sockets), Object Oriented Programming

Soft Skills: Strong Problem Solving, Excellent written and verbal communication- experienced in presenting projects and leading technical events, quick-learning, Comfortable working under pressure and meeting tight deadlines, Adaptability, Communication, Team Work, leadership, Event Organizing

POSITIONS OF RESPONSIBILITY/EXTRACURRICULAR

- Student Head-IEM Student's Gymkhana(2025-2026)

- Spearheaded the student activity council, representing 4000+ students.
- Organized flagship events including Smart Make-A-Thon([website link](#)), Smart Maker Festival, IEMPACT, coordinating cultural, and sports activities.
- Led a 1000+ students team
- Strengthened collaboration between students and faculty by addressing student concerns and facilitating smooth event execution
